

Report

MRI KNEE JOINT

CLINICAL HISTORY:

Mild discomfort or stiffness in the knee joint, especially after prolonged activity or exercise.

IMPRESSION:

Diagnosed through a physical examination, medical history, and X-rays of the knee joint. This scan shows no or minimal signs of joint space narrowing or bone spurs.

RISK FACTORS:

Risk factors for developing knee OA, including grade 0, may include age, previous knee injuries, family history of OA, obesity, joint overuse or repetitive stress, and other underlying health conditions.

MANAGEMENT:

Treatment for grade 0 knee OA may focus on conservative measures such as lifestyle modifications, weight management, physical therapy, and pain relief medications. Regular exercise. Pain relief medications, as needed, for minimal discomfort. Follow-up appointment in to monitor symptoms and assess response to conservative management.

Report

CONCLUSION:

The patient has been diagnosed with grade o knee OA, and a conservative management plan has been recommended. The patient will be followed up to monitor symptoms and assess response to treatment.

Healthy Knee Joint / KL Grade o Progression of Knee Osteoarthritis
